EDUCATION

University of Calgary

Calgary, AB

Bachelor of Science in Software Engineering - GPA: 3.8/4.0

September 2021 – April 2026

- Coursework: Data Structures & Algorithms, Design Patterns, Distributed Systems, Machine Learning, Performance Modeling, Software Architecture, Scalable Data Analytics
- Dean's List | Engineering Entrepreneurship Certificate | Co-op Education Program | Schulich Leadership Program | Scholar Program | Global Experience Program | ServiceNow CSA

EXPERIENCE

Software Developer Intern

May 2025 – April 2026

TC Energy

Calgary, AB

- Maintained and enhanced scalable backend systems for 10+ enterprise applications, debugging production issues and improving performance, reliability, and system stability.
- Redesigned workflows using Python automation and data pipelines, reducing execution time by 85–90% and improving reliability across operational processes.
- Developed ETL and data integration pipelines in Python and SQL on AWS, designing data ingestion, transformation, and validation processes for high-volume datasets and distributed analytics.
- Leveraged AI-assisted development tools to accelerate feature development, generate test coverage, and improve overall code quality across production codebases.
- Designed and implemented a cloud-based data lake to centralize multi-source data and support scalable analytics workflows
- Engineered cloud-native backend services supporting distributed data flows and large-scale processing.

Project Manager Intern

May 2024 – May 2025

TC Energy

Calgary, AB

- Supported 40+ pipeline integrity projects worth 100M+, ensuring preventative maintenance and operational reliability across Canada, by collaborating with 7 project managers to align deliverables and track milestones.
- Improved project efficiency and reporting accuracy by leading end-to-end app development efforts, from gathering requirements to implementing digital tools that enhanced stakeholder visibility and accelerated delivery.
- Optimized scheduling and resource utilization by refining delivery standards with cross-functional teams, reducing bottlenecks, and balancing workloads across projects.

Data Scientist Intern

May 2023 – August 2023

M2M Technology

Vancouver, BC

- Built and iterated supervised and unsupervised ML models with scikit-learn, including feature engineering, cross-validation, and hyperparameter tuning to improve predictive performance.
- Created interactive data visualizations to communicate trends and model insights to non-technical stakeholders, enabling faster, data-driven decisions.
- Implemented reproducible Python ETL pipelines (pandas, NumPy) for large-scale data cleaning, transformation, and model evaluation.

ENGINEERING CAPSTONE PROJECT

Automated Financial Analysis Pipeline | *Python, SQL*

September 2025 – April 2026

- Designed and built an end-to-end ML pipeline using LightGBM for predictive financial signal modeling.
- Integrated IBKR TWS API to ingest real-time market data and stream model outputs into a React frontend dashboard for live monitoring and decision support.
- Architected backend services in Python and REST APIs connecting the data pipeline, model inference layer, and frontend, applying object oriented design and design patterns.

TECHNICAL SKILLS

Languages: Python, C/C++, SQL, Java, JavaScript, TypeScript, HTML/CSS, R, Swift

Software Engineering: Data Structures & Algorithms, REST APIs, Object-Oriented Design, Backend Development

Developer Tools: Git, ServiceNow, AWS, Docker, Google Cloud Platform, CI/CD, PyCharm, Integration tests, Power BI

Testing & Quality: Unit Testing, Integration Testing, Debugging, Code Reviews

EXTRACURRICULAR LEADERSHIP

UofC Diversity and Advocacy Committee | *Director of Socio-Economic Welfare*

September 2023 – April 2026

- Hosted and managed community initiatives and fundraisers promoting inclusion, engagement, and access to resources.
